

Enthusiastic CSE (Cybersecurity) undergraduate with hands-on experience in **full-stack development**, **OOP**, and **system design**. Consistently builds and ships projects end-to-end. Strong **problem-solving** mindset with 100+ competitive programming solutions; eager to contribute to high-impact engineering teams.

2024–2028

CGPA: 7.5

Intermediate, Schooling (MPC) — strong foundation in Mathematics, Physics, Chemistry

Languages: C++, C, **Python**, HTML/CSS, JavaScript, SQL, $\text{\LaTeX}$
Tech & Tools: **MERN Stack** (MongoDB, Express.js, React.js, Node.js), Vite, **REST APIs**, Git/**GitHub**, VS Code
CS Concepts: **OOP**, **Data Structures**, Relational Algebra, **MySQL**, **MVC Architecture**
Soft Skills: Communication, **Leadership**, Problem-Solving, Agile, Adaptability

SubScript

- Built a **full-stack subscription management web app** using the **MERN stack** with **JWT-based authentication** and protected REST API routes.
- Designed a **modular MVC architecture** with separate controllers for Auth, Subscriptions, Analytics, and Notifications, improving maintainability and scalability.
- Implemented a **background scheduler (cron job)** for automated renewal reminders and a **real-time analytics dashboard** (monthly/yearly spend, category breakdown).
- Modelled **MongoDB schemas** with Mongoose for Users, Subscriptions, and Notifications with proper relational references and validation.

FitLife Pulse

- Built a **Python-based gym management system** tracking member registrations, trainer workload, workout plans, attendance, and fitness metrics (weight, BMI, calories).
- Applied **NumPy** for average attendance computation and **Pandas DataFrames** for structured analytics reports showing member status and progress.
- Implemented **recursive calorie aggregation**, attendance-based member classification (Consistent / Regular / Inactive), and a randomized **coupon reward system** for top performers.
- Used **core data structures** (dicts, lists, tuples) with **modular functions** to handle subscriptions, progress tracking, and BMI-based fitness goal analysis.

SAM

- Built a **console-based system** in **C++** using **STL containers** and file I/O to automate subject-wise attendance tracking with real-time date stamping.
- Generated compliance reports flagging students below the **75% threshold** and calculating sessions needed to meet it; designed with a **modular architecture** for scalability.

Handwritten

- Developing a **web-based tool** that converts typed text into realistic handwriting-style fonts using **Google Fonts API** (Patrick Hand, Indie Flower, Caveat) with a live style selector.
- Implemented a **download/export feature**; planning canvas-based pen stroke animations and custom ink/paper texture options.

- **Cybersecurity** — Infosys Springboard 2025 — Network security, threat detection, encryption, ethical hacking fundamentals
- **Prompt Engineering** — Infosys Springboard 2025 — Zero-shot, few-shot, chain-of-thought prompting for LLMs
- **Introduction to Cybersecurity** — Cisco NetAcad 2023 — Cyber threat landscape, data protection, network defence
- **Google Analytics for Beginners** — Google 2024 — Traffic analysis, dashboards, data-driven insights

- Solved **100+ programming problems** on LeetCode and HackerRank, strengthening **DSA** and analytical skills.
- Completed certified courses in **Python, SQL, and Cybersecurity** (Cisco Networking Academy).
- Actively contributed to team projects using **GitHub** version control and collaborative workflows.
- Participated in college-level **technical events** and hackathons.
